Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                COPACTOR: PROBABLY BINDS A 2FE-2S GROUP AND AN IRON ATOM. PATHMAY: UPPER NAPHHALENE CATABOLIC PATHMAY WHICH INVOLVES CONVERSION OF NAPHHALENE TO SALICYLATE, AND CATABOLISM OF DIBENZOTHLOPHENE (DBT) AND PHENANTHRENE. CONVERTS PHENANTHRENE TO LICHTOPHENE (DBT) AND PHENANTHRENE. CONVERTS PHENANTHRENE TO CATE AND THE METABOLISM OF DBT IS LIMITED TO CATE AND THE AROMATIC RING.

SUBUNIT: NAPHHALENE DIOXYGENASE (NDO) MULTICOMPONENT ENZYME SYSTEM IS COMPOSED OF AN ELECTRON TRANSFER COMPONENT IS COMPOSED OF SULFUR PROTEIN (ISP). THE ELECTRON TRANSFER COMPONENT IS COMPOSED OF FERREDOXIN RODOXIN REDUCTASE (NDOR) AND FERREDOXIN (NDOA), AND ISP IS COMPOSED OF AN HEXAMER OF THREE LARGE ALPHA SUBUNITS (NDOB) AND THREE SMALL BETA SUBUNITS (NDOC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    s SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SYSTEM IS COMPOSED OF AN ELECTRON TRANSFER COMPONENT AND AN IRON SULFUR PROTEIN (ISP). THE ELECTRON TRANSFER COMPONENT IS COMPOSED OF FERREDOXIN REDUCTASE (NDOR) AND FERREDOXIN (NDOA), AND ISP IS COMPOSED OF A LARGE ALPHA SUBUNIT (NDOB) AND A SMALL BETA SUBUNIT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  dihydronaphthalene-1,2-diol + NAD(+).

COFACTOR: PROBABLY BINDS A 25E-2S GROUP AND AN IRON ATOM.

PATHWAY: UPPER NAPTHALENE CATABOLIC PATHWAY WHICH INVOLVES

CONVERSION OF NAPTHALENE TO SALICYLATE, AND CATABOLISM OF

DIBENZOTHIOPHENE (DET) AND PHENANTHRENE. CONVERTS PHENANTHRENE

1-HYDROXY-2-NAPTHOLY ACID AND THE METABOLISM OF DET IS LIMITED

OXIDATION OF THE AROMATIC RING.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (NDOC).

SUBUNIT: THIS DIOXYGENASE SYSTEM CONSISTS OF FOUR PROTE
TWO SUBUNITS OF THE HYDROXYLASE COMPONENT (TODC1 AND TO)
FERREDOXIN (TODB) AND A FERREDOXIN REDUCTASE (TODA).
SIMILARITY: BELONGS TO THE BACTERIAL RING-HYDROXYLATING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            todC1C2BADE
